

Guilherme Augusto POTJE

PERSONAL DATA

PLACE AND YEAR OF BIRTH: Presidente Prudente, SP, Brazil | 1991
CITIZENSHIP: Brazilian
CURRENT LOCATION: Pampulha Area, Belo Horizonte – MG, Brazil
PHONE: +55 31 99324-2201
EMAIL: guipotje@gmail.com
WEBPAGE: <https://guipotje.github.io>

EDUCATION

- | | |
|----------------|---|
| 2018 – Current | Ph.D. Student in COMPUTER SCIENCE
<i>Federal University of Minas Gerais (UFMG), Belo Horizonte – MG, Brazil.</i>
Fields: Computer Vision and Deep Learning
Research Title: “Towards Deformation-Invariant Image Descriptors”
Advisor: Prof. Erickson R. NASCIMENTO (UFMG)
Co-Advisor: Dr. Renato MARTINS (INRIA) |
| 2014 – 2017 | M.Sc. in COMPUTER SCIENCE
<i>Federal University of Minas Gerais (UFMG), Belo Horizonte – MG, Brazil.</i>
Field: Computer Vision
Thesis: “On the Improvement of Three-Dimensional Reconstruction from Large Datasets”
Advisor: Prof. Erickson R. NASCIMENTO
Co-Advisor: Prof. Mario F. M. CAMPOS Link to thesis |
| 2010 – 2013 | Bachelor’s Degree in COMPUTER SCIENCE
<i>Unoeste – FIPP, Presidente Prudente – SP, Brazil.</i>
Field: Image Processing
Thesis: “Building’s Roof Contour Extraction Using LiDAR and Aerial Images”
Advisor: Mario A. PAZOTI Link to thesis |

WORK EXPERIENCE

2017 – 2018	<p>Research Engineer, VeRLab and Instituto Tecnológico Vale (ITV)</p> <p>I worked as a Computer Vision research engineer on an R&D project founded by the Instituto Tecnológico Vale (ITV) called “EspeleoRobô”. The purpose of the research was to develop an autonomous robot for cavity exploration and tools for immersive visualization and interaction with 3D mapped cavities. In this project, my activities were focused on the 3D data processing by creating a mesh reconstruction pipeline as a software, and also an application to visualize the reconstructed 3D model through the Microsoft HoloLens device. Link to video</p>
2014 – 2016	<p>Graduate Research Intern, VeRLab – Computer Vision & Robotics Lab, UFMG</p> <p>During my Master thesis, I worked on a mining research project founded by Instituto Tecnológico Vale (ITV). The focus of the project was to create an autonomous system for aeromagnetic surveys using multiple drones. My activities were centered on coupling 3D reconstruction from images, remote sensing and geophysics. My contributions to the project were on developing a software for 3D reconstruction from images, and a tool for magnetic data processing and data fusion that generates 3D magnetic maps. Link to video</p>

LANGUAGES

BRAZILIAN PORTUGUESE: Mother tongue
ENGLISH: Proficient

COMPUTATIONAL TOOLS

Basic Knowledge: Tensorflow, Scikit-learn, JAVA, C#, Git, Relational Databases, LINUX
Advanced Knowledge: Python, SciPy, NumPy, PyTorch, OpenCV, C, C++

TOPICS OF INTEREST

General: Computer Vision, Deep Learning, Robotics, Computer Graphics, Artificial Intelligence
Specific: Image Matching, Structure-from-motion, 3D Reconstruction, 3D Vision
